

IZAZ AHAMED M

Fullstack Mobile Developer / Flutter & Node.js

+91 7339147085 | izazahamed0508@gmail.com | Tamil Nadu, India

SUMMARY

Senior Software Engineer with 4+ years building production-scale mobile and backend systems using Flutter, Node.js, Firebase, and Google Cloud Platform. Strong foundation in Object-Oriented Programming, SOLID principles, design patterns, and the Software Development Life Cycle (SDLC), with a proven track record owning features end-to-end — from system design and clean architecture through automated CI/CD release to the Play Store and App Store. Skilled in state management (Bloc, Riverpod, Provider, GetX), real-time communication (WebRTC), scalable backend design, and Firestore optimisation. Strong DSA and system-design fundamentals focused on building reliable, maintainable, and high-performance applications.

TECHNICAL SKILLS

Frameworks & Libraries: Flutter, Node.js, Express.js, GraphQL

Languages: Dart, JavaScript, Java

Flutter Specifics: Flutter Flavours (Multi-Environment Build Variants), Native Plugins, Isolates/Compute, Dependency Injection, Bluetooth Device Pairing, Flutter Animations, LayoutBuilder-based Responsive Design, Keys & BuildContext/State Management, GetX Navigation & Routing, Toasts/Dialogs/BottomSheets, SliverAppBar, Reusable Utility Functions (Date Conversion, etc.)

UI/UX: Material UI, Google Fonts, Figma-to-Flutter Conversion, Dark Mode Theming, Confetti/Micro-animations, Multi-language (i18n/l10n)

State Management: Bloc, Riverpod, Provider, GetX

Auth & Session Management: JWT, OAuth, Mobile OTP Auth, Token Expiry & Refresh, Session Management

Backend Architecture: Express.js Middleware, MVC Architecture, RESTful APIs, Error Handling

Testing & Debugging: Unit Testing, Widget Testing, Flutter DevTools, Chrome DevTools

Firebase Services: Authentication, Firestore, Cloud Functions, FCM, Storage, Analytics, Crashlytics, App Check, Hosting, Scheduler

Cloud Platforms & Infra: Google Cloud Platform (GCP), Heroku, Digital Ocean (Droplet, S3, Functions), DNS Configuration, Website Deployment

Real-Time Comms: WebRTC, CallKit, Socket.IO, WebSockets

Databases & Caching: MongoDB, Redis, SQLite, Hive, Network/Image Cache Management, Local DB Management

Security & Privacy: API Key & Secrets Management (dotenv, Secure Storage), Data Privacy Best Practices

Maps & Geolocation: Google Maps (Markers, Polylines, Polygons), Real-Time Driver Tracking, Geofencing

Dev Tooling & CLI: Homebrew, Linux Shell, Firebase CLI, npm, Gradle, CocoaPods

Version Control & CI/CD: Git, GitHub, GitLab, Bitbucket, GitHub Actions (tag-triggered pipelines), Fastlane-style TestFlight/Play Console Deploys, JKS Keystore & iOS Certificate Management, Linux/macOS Desktop Builds

AI-Assisted Development: Claude, ChatGPT, GitHub Copilot, Gemini

Architecture & Design: Clean Architecture, MVVM, OOP Concepts, SOLID Principles, Singleton Pattern, Lazy Initialization, SDLC, System Design, Distributed/Serverless Functions, DSA

App Deployment: Play Store, App Store, Firebase App Distribution, TestFlight

Payments & Fintech: Stripe, Razorpay, Bulkpe, NEFT/IMPS Payouts, Wallet Management

PROFESSIONAL EXPERIENCE

Senior Software Developer | Feb40 July 2025 – Present

- Solely designed and architected the entire system for a multi-role ride-hailing, parcel, food, and grocery delivery platform (Flutter + Node.js + Firebase + GCP), serving 5,000+ active users across taxi, bike, and delivery verticals.

User App: <https://play.google.com/store/apps/details?id=com.feb40.app> | **Partner App:** https://play.google.com/store/apps/details?id=com.feb40_service.app

- Built a background driver-alert and matching workflow using Express.js — automatically notifying nearby available drivers in real time when a user books a taxi or places a food/grocery order.
- Built and maintained a GitHub Actions CI/CD pipeline triggered by Git tag pushes (e.g. v1.2.0), automating build, signing (including JKS keystore & iOS certificate management), and deployment to TestFlight and the Google Play Console — cutting manual release time and eliminating release-step errors.
- Implemented real-time voice calling between riders and drivers using WebRTC with CallKit/FCM signalling, resolving call-state, ringtone, and audio-session edge cases for production reliability.

- Implemented secure mobile OTP-based authentication for rider, driver, and partner onboarding via Firebase Authentication.
- Built time-window-based availability logic for restaurant, food, and grocery listings, and implemented fast, seamless search APIs across grocery items, food items, restaurants, and addresses.
- Designed delivery-partner fare-slab calculations incorporating GST and platform commission fetched from admin settings, to compute and display the total taxi booking fare in the user app.
- Optimised Firestore queries/composite indexes, implemented centralized error handling, integrated Firebase Crashlytics, Analytics, App Check, and Hosting, and designed an SMTP-based email service (Nodemailer) to auto-send invoice emails to customers.
- Optimised Flutter app startup time by ~30% through lazy initialisation, deferred imports, and main-thread unblocking.
- Designed and developed referral bonus, restaurant/taxi offers, incentive systems, wallet management, and rating systems, along with NEFT/IMPS driver payouts via Bulkpe and scratch-card reward mechanics for users.
- Implemented Google Maps integration with custom markers, polylines, and polygons for real-time driver tracking and geofenced zones.
- Drove architectural decisions around Bloc / Riverpod / Provider / GetX state management, GCP Cloud Functions (serverless), modularisation, and code reusability.
- Mentoring junior developers through code reviews, architectural walkthroughs, and best-practice documentation.

Software Developer | Abservetech *June 2024 – June 2025*

- Built a full-stack Construction Management Platform using Flutter and Firebase (Firestore, Auth, Storage, Cloud Functions, Analytics) featuring social feeds, groups, courses, ads, job postings, project management, email/in-app notifications, and endorsements — launched on Play Store and App Store.
- Developed a Taxi Booking App with separate rider and driver modules, real-time GPS tracking, push notifications (FCM), background location services, and Stripe / Razorpay payment integration.
- Created a Hotel Booking App with real-time room availability, booking management, and secure payment workflows.
- Optimised app performance using Flutter Isolates for parallel processing and image-cache management, reducing memory usage and improving app responsiveness.

Flutter Developer | Mind Vision Technologies *July 2022 – May 2024*

- Built a full-stack eCommerce App using Flutter, Node.js, and MongoDB with JWT-based authentication (token expiry & refresh, session management), complete product catalogue, cart, checkout, and payment features.
- Developed a Food Delivery App (Customer & Delivery Boy modules) in Flutter with real-time GPS tracking, live order status updates, and push notifications.
- Authored native Kotlin and Swift plugins to bridge platform-specific capabilities (camera, biometrics, file pickers) into Flutter apps where pure-Dart solutions were insufficient.
- Built WhatsApp Broadcasting campaign tools integrating official WhatsApp Business APIs to send media and messages directly to users' WhatsApp accounts for large-scale digital marketing outreach, alongside a Task Management app in Flutter Web.
- Deployed backend services to Heroku and Digital Ocean, ensuring reliable uptime and streamlined client-server data exchange.
- Applied best practices across all projects: Bloc / Provider / GetX state management, RESTful API optimisation in Node.js, clean architecture, and cloud deployment.

NOTABLE PROJECTS

- Ride-Hailing & Delivery Platform — Solely architected and led end-to-end development using Flutter + Node.js + Firebase/GCP, featuring WebRTC voice calling, mobile OTP-secured authentication, real-time GPS tracking, FCM notifications, Bulkpe/Razorpay payments, automated GitHub Actions CI/CD to App Store & Play Store, and a multi-role admin dashboard. 5,000+ users.
- Construction Management Platform — Cross-platform (iOS & Android) social + project management app with feeds, role-based access, document uploads to Firebase Storage, and real-time notifications.
- eCommerce + Food Delivery App — Full-stack Flutter + Node.js + MongoDB suite with product management, real-time GPS delivery tracking, native Kotlin/Swift plugins, cart, and payment gateway integration.

EDUCATION

Bachelor of Engineering — SACS MAVMM Engineering College, Madurai 2018 – 2022 | 76%

Higher Secondary (XII) — Sourashtra Higher Secondary School, Madurai 2017 – 2018 | 78.6%
