

# IZAZ AHAMED M

Senior Flutter / Full-Stack Developer

+91 7339147085 | izazahamed0508@gmail.com | github.com/Izazv3 | Tamil Nadu, India

## SUMMARY

Senior Software Engineer with 4+ years of experience designing and shipping production-scale mobile and backend systems using Flutter, Node.js, Firebase, and MongoDB. Proven ability to own features end-to-end — from system design (HLD & LLD) to Play Store / App Store release. Experienced in real-time architectures, geolocation services, Firestore query optimisation, and distributed Cloud Functions. Strong DSA foundation with a clean architecture mindset and a track record of delivering across ride-hailing, construction, hospitality, food delivery, and e-commerce domains.

## PROFESSIONAL EXPERIENCE

### Senior Software Developer

Feb40 | July 2025 – Present

- Leading development of a **Rapido-style ride-hailing & parcel delivery platform** (Flutter + Node.js + Firebase) serving **5 000+ active users** across taxi, bike, and delivery verticals.
- Engineered a **geohash-based driver-matching engine** using 6-char geohash prefix range queries across 9 neighbour cells, reducing Firestore read costs by ~60% vs full collection scans.
- Built a **sequential driver notification loop** with per-driver timeouts, expanding-radius search (1–5 km in 1 km steps), exponential backoff retries, and Promise.allSettled error isolation.
- Designed a **peak-hour dynamic fare engine** supporting multi-slot configs, midnight-crossing time ranges, and overlap resolution (peak vs night — picks higher value), with Cloud Function backend and Flutter admin UI.
- Optimised Flutter app startup time by ~30% through lazy initialisation, deferred imports, and main-thread unblocking.
- Drove architectural decisions around **Provider / GetX state management**, modularisation, composite Firestore indexes, and code reusability.
- Mentoring junior developers through code reviews, architectural walkthroughs, and best-practice documentation.

### Software Engineer (Flutter & Backend)

Abservetech | June 2024 – June 2025

- Built a full-stack **Construction Management Platform** using Flutter and Firebase (Firestore, Auth, Storage, Cloud Functions, Analytics) featuring social feeds, groups, courses, ads, job postings, project management, email / in-app notifications, and endorsements — launched on Play Store and App Store.
- Developed a **Taxi Booking App** with separate rider and driver modules, real-time GPS tracking, push notifications (FCM), background location services, and Stripe / Razorpay payment integration.
- Created a **Hotel Booking App** with real-time room availability, booking management, and secure payment workflows.
- Optimised app performance using Flutter Isolates for parallel processing and image-cache management, reducing memory usage and improving app responsiveness.

### Flutter Developer

Mind Vision Technologies | July 2022 – May 2024

- Built a full-stack **eCommerce App** using Flutter, Node.js, and MongoDB with complete product catalogue, cart, checkout, and payment features.
- Developed a **Food Delivery App** (Customer & Delivery Boy modules) in Flutter with real-time GPS tracking, live order status updates, and push notifications.
- Created **Task Management and WhatsApp Broadcasting** applications using Flutter Web with real-time communication patterns.
- Developed a **Website Builder Platform** using Next.js and GrapesJS, enabling drag-and-drop page creation with live preview.
- Applied best practices across all projects: Provider / GetX state management, RESTful API optimisation in Node.js, clean architecture, and cloud deployment on Digital Ocean and Firebase.

## NOTABLE PROJECTS

- **Ride-Hailing & Delivery Platform** — Flutter + Node.js + Firebase with geohash driver matching, dynamic fare engine, real-time GPS tracking, FCM notifications, Stripe/Razorpay payments, and multi-role admin dashboard. 5 000+ users.
- **Construction Management Platform** — Cross-platform (iOS & Android) social + project management app with feeds, role-based access, document uploads to Firebase Storage, and real-time notifications.
- **eCommerce + Food Delivery App** — Full-stack Flutter + Node.js + MongoDB suite with product management, real-time GPS delivery tracking, cart, and payment gateway integration.
- **Website Builder (No-Code)** — Next.js + GrapesJS drag-and-drop builder with live preview, component library, and JSON schema persistence.

## TECHNICAL SKILLS

---

|                                   |                                                                                |
|-----------------------------------|--------------------------------------------------------------------------------|
| <b>Frameworks &amp; Libraries</b> | Flutter, Node.js (Express.js), Next.js, Socket.IO, Tailwind CSS                |
| <b>Languages</b>                  | Dart, JavaScript, TypeScript (basic), Java, HTML5, CSS3                        |
| <b>State Management</b>           | Provider, GetX                                                                 |
| <b>Databases</b>                  | Firestore, MongoDB, SQLite, Hive                                               |
| <b>Firebase Services</b>          | Authentication, Firestore, Cloud Functions, FCM, Storage, Analytics, Scheduler |
| <b>Cloud &amp; DevOps</b>         | Digital Ocean (Droplet, S3, Functions), Git, GitHub, GitLab, Bitbucket, CI/CD  |
